Conditions O	f Carriage					
Only those spectra 06JUN16, may	cified hazardous carg be carried. The spec	oes named in the vess ified hazardous cargoe	el's Cargo Authority A es may be carried only	Attachment (CAA), ser (in the tanks indicated	ial #C1-1602	2120, dated

Per 46 CFR 150.130, the person in charge of the barge is responsible for ensuring that the compatibility requirements of 46 CFR 150 are met. Cargoes must be checked for compatibility using figures, tables and appendices of 46 CFR 150 in conjunction with the compatibility group numbers from the "Compat Group No" column listed in the vessel's CAA.

When the vessel is carrying cargoes containing 0.5% or greater benzene by volume, the person in charge is responsible for ensuring the provisions of 46 CFR 197, Subpart C, are applied.

46 CFR 151.45-2(b) contains restrictions on operation of box and square end barges as the lead barges of tows.

Vapor Control Authorization

Per 46 CFR 39, excluding part 39.4000, this vessel's vapor collection system (VCS) has been inspected to the plans approved bv MSC Letter C1-1602120 dated June 6. 2016. and has been found acceptable for the collection of bulk liquid cargo vapors Dept. Of Home Sec., USCG - CG-854 (Rev. 06-04) Page 2 of 4 OMB Approved No. 1625-0 OMB Approved No. 1625-0057

United States of America Department of Homeland Security United States Coast Guard Certification Date: 24 Feb 2023 Expiration Date: 24 Feb 2024

Temporary Certificate of Inspection

Vessel Name: KIRBY 30077

annotated with "Yes" in the CAA's VCS column of the vessel's CAA. The VCS system has been approved with a pressure side 3 psig P/V valve with Coast Guard Approval 162.017/167/3. The cargo tank top is suitable for a maximum allowable working pressure (MAWP) of 3.5 psi.

Per 46 CFR Part 39.1017 and 39.5000(e) this vessel's VCS has been evaluated and approved for multi-breasted tandem loading with other vessels specifically approved to tandem load with this vessel.

Stability and Trim

Per 46 CFR 151.10-15(c)(2), the maximum tank weights listed above reflect uniform (within 5%) loading at the deepest draft allowed. When carrying Subchapter "O" cargoes at shallower drafts, the barge should always be loaded uniformly.

The maximum design density of cargo which may be filled to the tank top is 8.75 LBS/GAL. Cargoes with higher densities up to 13.6 LBS/GAL, may be carried as slack loads but shall not exceed the tank weight limits as listed above.

Notes 1 Under Environmental Control, Tanks, NR means that the tank group is suitable only for those cargoes which require no environmental control in the cargo tanks

2 Under Environmental Control, Handling Space, NR means that the tank group is suitable only for those cargoes which require no environmental control in the cargo handling space. NA means that the vessel does not have a cargo control space, and this requirement is not applied.

3 Under Electrical Hazard Class, NA means that the tank group is suitable only for those cargoes which have no electrical hazard class requirement. NR means that the vessel has no electrical equipment located in a hazardous location

Flammable louid cargoes as defined in 46 CFR 30-10 22

Not applicable to barges certificated under Subchapter D

The specified cargo's provisional classification for vapor control systems

This requirement is in addition to the requirements of Category 1

requirement is in addition to the requirements of Category 1

(Polymenzes and highly toxic) Must comply with requirements of Categories 1, 2 and 3

The cargo has not been evaluated/classified for use in vapor control systems

(High vapor pressure and highly toxic) Must comply with requirements of Catogories 1, 3 and 5

(High vapor pressure and polymenzes) Must comply with requirements of Categories 1, 2 and 5

Combustible liquid cargoes, as defined in 46 CFR 30-10 15

Those subchapter O cargoes which are not classified as a flammable or combustible liquid

The vessel's tank group (as defined in Section 4) which is authorized for carnage of the named cargo

es The vessel's VCS has been reviewed and approved by the MSC to control vapors of the specified cargo No The vessol's VCS has been reviewed and is not approved by the MSC to control vapors of the specified cargo

Yes. The vessel's VCS has been reviewed and approved by the MSC to control vapors of the specified, cargo No The vessel's VCS has been reviewed and is not approved by the MSC to control vapors of the specified cargo

The required bargo hull classification for carriage of the specified Subchapter O hazardous material cargo see 46 CFR 151 10.1

The cargo classification assigned to each flammable or combustible liquid. Grades inside of "{}" indicate a provisional assignment based upon literature sources which were not verified by manufacturers data. The Person-in-Charge shall verify the cargo grade based on Manufacturers data and ensure that the barge is authorized for carriage of that grade of cargo

No flammability/combustibility grade has been assigned yet as the nocessary flash point/vapor prossure data for such assignments are presently not available

Designed to carry products which require the maximum preventive measures to preclude the uncontrolled release of the cargo. See 46 CFR 151 10 1(b)(1) Designed to carry products which require significant preventive measures to preclude the uncontrolled release of cargo. See 46 CFR 151 10-1(b)(3) Designed to carry products of sufficient hazard to require a moderate degree of cantrol. See 46 CFR 151 10-1(b)(4)

The vessel's tank group (as defined under the "46 CFR Tank Group Characteristics" listed on page 1) which is authorized for camage of the named cargo

(No additional VCS requirements above those for benzene gasolines and crude oil) All requirements applying to the handling of oil and hazardous materials in Titles 33 and 46 Code of Federal Regulations (CFR) apply to these cargoes. Those specifically dealing with vapor control systems are in 33 CFR 155 750 33 CFR 156 120

(Highly toxic) VCSs for these toxic cargoes cannot use a spill valve or rupture disk as the primary means to meet the overfull protection requirement of 46 CFR 39 20 9

(High vapor pressure) VCS pressure drop calculations for cargoes with a vapor pressure greater than 14.7 psia at 115 F must take into account increased vapor air mixture densities and vapor growth rates as compared to Category Toargoes. Consult the Marine Safety Center's VCS Guidelines for further information. This

enzes) Polymenzation and residue build-up of these cargoes can adversely affect the vessel by fouling safety componenets and restricting vapor flow which could (reprint as) continue takes of the second of Manne Inspection This is in addition to the requirements of Calegory 1 Pleaso note that a material not normally considered a monomer can be a problem in detonation

33 CFR 156 170 48 CFR 35 35 and 48 CFR 39 The cargo tank ventring system calculations (46 CFR 39 20-11) and the pressure drop calculations (46 CFR 39 30 1(b)) must use appropriate friction factors, vapor densities and vapor growth rates

The flammability/combustibility grade of these cargoes may vary depending upon the flashpoint and Reid vapor pressure. The Person in-Charge shall verify the cargo grade based on Manufacturers data and ensure that the barge is authorized for carrage of that grade of cargo
